                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                      This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or paptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the Label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide cypes and for investigating cell differentiation of cell or tissue types and for investigating cell differentiation. The method allows the method for investing central progress to be determined simultaneously.

ABO13410-ABO54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                        CC This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two CC classes of oligomers, the degree of methylation is calculated. The method CC is used: (i) for diagnosis and/or prognosis of side effects of CC classes of oligomers, the degree of methylation is calculated. The method CC is used: (i) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory cystems etc., particularly by detecting mutations or single nucleotide CC polymorphisms (SNP's); and (ii) for differentiation of cell or tissue completed for investigating cell differentiation. The method allows the CC methylation status of many C residues to be determined simultaneously. ABO13410-ABQ54121 represent genomic DNA sequences used to illustrate the CC method for determining the degree of cytosine methylation described in two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                            protein product. The CASP8 gene has been localized to human chromosome 2933-34. The methods are used to diagnose or prognose cancer. Cancer is treated by administering a vector that expresses a gene encoding functional CASP8 in cells. The cancer that is diagnosed or treated is a tumour in which a myc gene is amplified, such as a neuroblastoma.
                                                                                                                                                                                                                                                                                                                                                                                                                             part of the death inducing signaling complex (DISC) associated with the Fas receptor. CASP8 is inactivated in cancers, and plays a role of a tumour suppressor gene. The CASP8 promoter region sequences, in particular Region 1 and Region 2, are crucial to the design and execution of the genomic methylation PCR analysis of CASP8 gene inactivation. Methylation PCR can be used to examine even minute amounts of patient material to demonstrate whether the CASP8 gene expresses an mRNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Investigation of silencing of caspase-8 (CASP8) gene by methylation was analyzed using methylation-sensitive PCR analysis. Amplification of the 5' untranslated region (UTR) of the Casp8 gene was performed in reaction mixtures containing bisulfite treated DNA. Primers AAA51818-23 were designed to produce a 320 bp fragment in the upstream region of Casp8 gene extending from nucleotides +221 to +541. Wild type primers were used to amplify the corresponding region of untreated genomic DNA.
                                        Aggressive neuroblastoma, juvenile neuroblastoma (preferred), small-cell lung carcinoma, non-small-cell lung carcinoma, colorectal carcinoma, or uterine cervical carcinoma can be diagnosed with the new method. A kit for screening for a compound that induces death-receptor-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting inactivation of a caspase-8 (CASP8) gene for diagnosing prognosing cancer, comprises detecting a modification of genomic comprising the CASP8 gene that results in inactivation of the general comprises the caspase of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         used to amplify the corresponding region of untreated genomic DNA. Controls without DNA were also performed. CASP8, a cysteine protease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 3; Page 61; 107pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC Investigation of silencing of caspase-8 (CASP8) gene by methylation was CC analyzed using methylation-sensitive PCR analysis. Amplification of the CS with the CS were containing bisulfite treated DNA. Primers AAA51818-23 were containing bisulfite treated DNA. Primers AAA51818-23 were containing from nucleotides +221 to +541. Wild type primers were considered to produce a 320 bp fragment in the upstream region of Casp8 controls without DNA were also performed. CASP8, a cysteine protease, is controls without DNA were also performed. CASP8, a cysteine protease, is controls without DNA were also performed. CASP8, a cysteine protease, is controls without DNA were also performed. CASP8, a cysteine protease, is controls without DNA were also performed. CASP8, a cysteine protease, is controls without DNA were also performed. CASP8, a cysteine protease, is controls without DNA were also performed. CASP8, a cysteine protease, is controls a suppressor gene. The CASP8 promoter region sequences, in control to the destination of the general waterion of the caspa promoter region sequences, in control waterion, control manual control control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The inventi useful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL18175) and the encoded proteins (ABB5737-ABB72072).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 on:
                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N_Geneseg_101002:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of GlimmerM, see Mihaela Pertea,
http://www.ttgr.org/softlab/glimmerm.htm/glimmerm.html, and
GeneSplicer (Mihaela Pertea and Steven Salzberg, contact
mpertea@tigr.org), searches of the complete sequence against a
peptide database and the plant EST database at TIGR
(http://www.tigr.org/tdb/tgi.shtml), Annotated genes are named to
indicate the level of evidence for their annotation. Genes with
similarity to other proteins are named after the database hits.
Genes without significant peptide similarity but with EST
similarity are named as unknown proteins. Genes without protein
or EST similarity, that are predicted by more than two gene
prediction programs over most of their length are annotated as
hypothetical proteins. Genes encoding tRNAs are predicted by
tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).
Simple repeats are identified by repeatmasker (Arian Smit,
http://ftp.genome.washington.edu/RM/RepeatMasker.html).

E-mail enquiries: humquery@sanger.ac.uk Clone-requests: clonerequest@sanger.ac.uk
On Jul 14, 2000 this sequence version replaced gi:8894204.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              43249 GTCTATCTACATTGGAAACGA 43269
                                                                                                                                                                                                                                                Group. Further information can be tourned the fibrily www.sanger.ac.uk/HGP/Chri RP4-813B7 is from the library RPCI-4 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. ```
sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This record contains 90 individual
